

PGD 217 : Object Oriented Programming

Lab Exam 1 #

Marks: 15 #

Time: 60 Minutes

Create a Calculator in Java that have the below features.

1. Write a function named *productCalcualte* that print the odd integers from a range a to b.
2. Write a couple of functions named *sumCalcualte* that takes couple of integer numbers (might be 2, or 3, or 4) and calculate the sum of them. You should use method overloading.
3. Write a function named *calculationHistory* that saves all the calculation in an arrayList. Then display (print in console) them if user want.
